$ dr install-run.dsh -pagesize 900x600 -sans GillSans -mono Inconsolata-Medium -serif Charter-Italic
```

# Installing

# Installing using go and git

```
$ go install github.com/ajstarks/decksh/cmd/decksh@latest
```

Install the latest version of decksh

```
$ go install github.com/ajstarks/deck/cmd/pdfdeck@latest
```

Install the latest version of pdfdeck

```
$ git clone https://github.com/ajstarks/deckfonts $HOME
```

Install fonts into \$HOME/deckfonts

```
$ decksh -help
```

```
$ pdfdeck -help
```

Do a test run of decksh and pdfdeck

(Update your PATH environment variable to include the location of the installed binaries, typically \$HOME/go/bin)

The screenshot shows the Visual Studio Code editor with a file named `hw.dsh` open. The file contains a sequence of commands for a presentation deck. Below the editor, the terminal window shows the execution of these commands using `decksh` and `pdfdeck`.

```
deck
  slide "black" "white"
    ctext "hello, world" 50 25 10
  circle 50 0 100 "green"
eslide
edeck
```

Terminal output:

```
PS C:\Users\ajstarks> decksh -o hw.xml hw.dsh ; pdfdeck hw.xml
PS C:\Users\ajstarks> decksh -o hw.xml hw.dsh ; pdfdeck hw.xml
PS C:\Users\ajstarks>
```

# Using the -grid option

# pdfdeck [options] inputfile

Option	Default	Description
-sans	helvetica	Sans Serif font
-serif	times	Serif font
-mono	courier	Monospace font
-symbol	zapfdingbats	Symbol font
-pages	1-1000000	Pages to output (first-last)
-pagesize	Letter	Page size (w,h or Legal, Tabloid, A[3-5], ArchA, 4R, Index)
-grid	0	Draw a grid at specified % (0 for no grid)
-fontdir	\$HOME/deckfonts	Font directory
-outdir	Current directory	Output directory
-stdout	false	Output to standard output
-author	""	Document author
-title	""	Document title

# command examples

```
decksh -o file.xml file.dsh; pdfdeck file.xml
```

process file.dsh to file.xml to file.pdf

```
decksh file.dsh | pdfdeck -stdout - > output.pdf
```

Pipe the output from decksh, making output.pdf

```
pdfdeck -pagesize 1920,1080 -pages 10-20 -grid 5 file.xml
```

render pages 10-20 to file.pdf, page size of 1920 (width) x 1080 (height) pixels, on a 5% grid

```
pdfdeck -sans FiraSans-Regular -serif Charter-Regular -mono Inconsolata-Bold file.xml
```

use FiraSans-Regular.ttf, Charter-Regular.ttf, and Inconsolata-Bold.ttf from the deckfonts directory

```
echo file.dsh|entr -s 'decksh file.dsh|pdfdeck -stdout - > f.pdf; pkill -HUP mupdf'
```

When file.dsh changes, make f.pdf, and refresh the viewer
