

# decksh

a little language for decks

Anthony Starks  
@ajstarks

A language is any mechanism to express intent, and the input to many programs can be viewed profitably as statements in a language. This column is about those “little languages.”

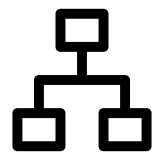

Jon Bentley, Little Languages, Communications of the ACM, August 1986

hello world

hello world.

text

# ctext

etext

x y size [font] [color] [op] [link]

x y size [font] [color] [op] [link]

x y size [font] [color] [op] [link]

Rotated rectangle(315) named(225) about(135)

# rtext

x y angle size [font] [color] [op] [link]

A circular arrangement of words in a spiral pattern, starting from the top and moving clockwise:

- there
- wor1d
- pIwom
- there
- hello
- oTTeH

The word "wor1d" is written with a '1' instead of a 'l'. The word "pIwom" is likely a misspelling of "picture". The word "oTTeH" is written with a 'T' instead of a 't'.

arctext

# A record 64 million Americans live in multigenerational households

The number and share of Americans living in multi-generational family households have continued to rise, despite improvements in the U.S. economy since the Great Recession. In 2016, a record 64 million people, or 20% of the U.S. population, lived with multiple generations under one roof, according to a new Pew Research Center analysis of census data.

# Jane Doe

Rometty

The first woman to lead IBM, Rometty shifted IBM away from shrinking businesses such as computers and operating system software, and into higher-growth areas like artificial intelligence. Her tenure has also been met by fierce criticism relating to executive compensation bonuses, layoffs, outsourcing, and presiding over 24 consecutive quarters of revenue decline.

Palmisano

Palmisano's mandate was to move into new unique businesses with high profit margins and potential for innovation. This included purchasing PwC Consulting in 2002, so that IBM could go beyond selling computers and software and help customers use technology to solve business challenges in areas such as marketing, procurement and manufacturing.

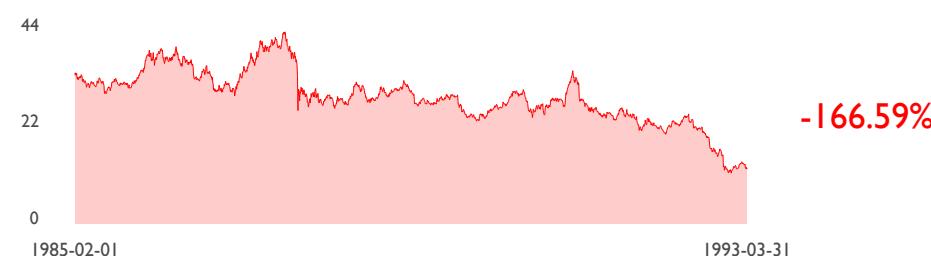

Gerstner

Gerstner's choice to keep the company together was the defining decision of his tenure, as these gave IBM the capabilities to deliver complete IT solutions to customers. Services could be sold as an add-on to companies that had already bought IBM computers, while barely profitable pieces of hardware were used to open the door to more profitable deals.

Akers

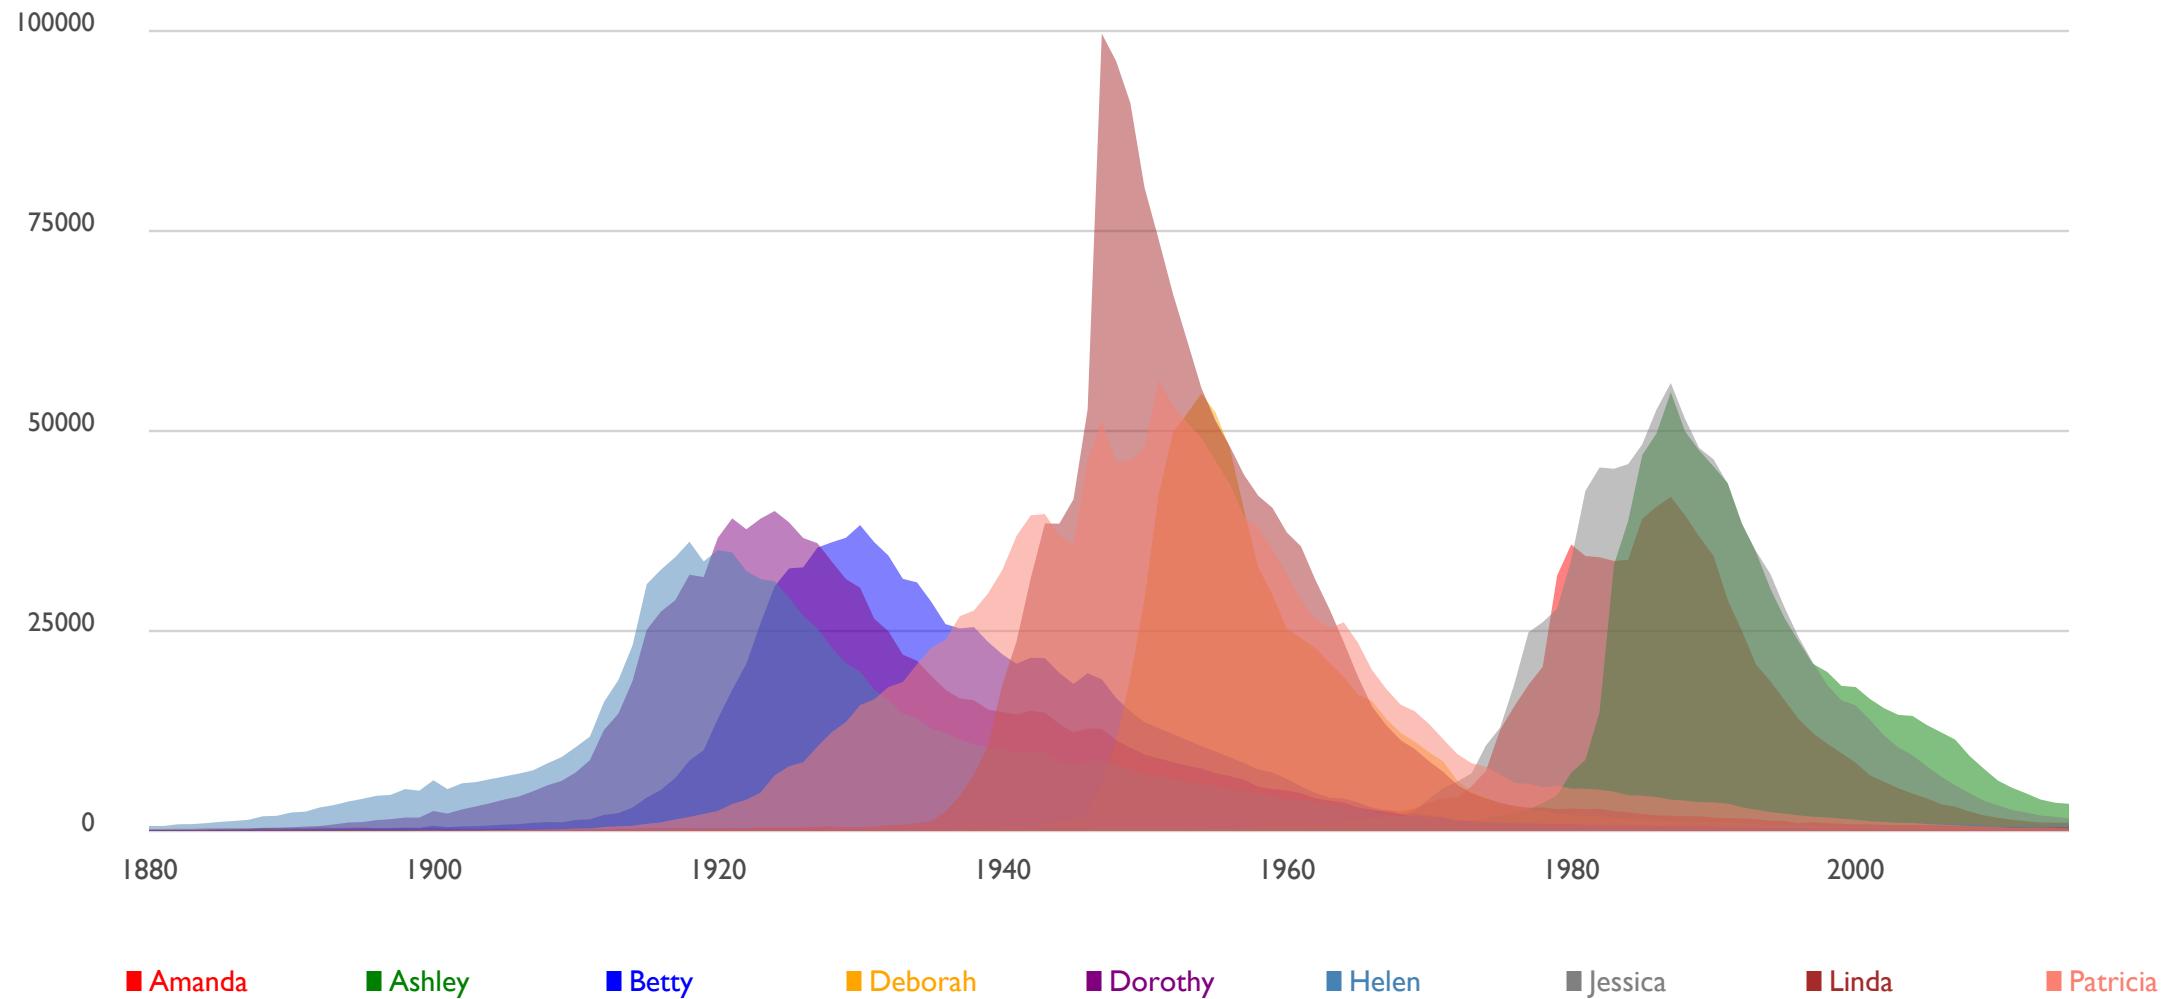

Akers was credited with simplifying the company's bureaucracy to focus more on profits. In a restructuring intended to reverse three years of disappointing performance, he created five new, autonomous organizations responsible for the company's innovation, design and manufacturing. Akers was forced to resign, after the company posted an unprecedented \$5 billion annual loss.
